Subject Index to Volume 9

Acetylcholine, effects on cyclic GMP, 449
Actin, rate of synthesis in axons, 362
Anoxic block, in nerve, 229–244
Axonal transport, 229–245, 317–324, 461, 468
——, proteins conveyed in, 433–441
Axoplasmic flow, 461

Buccal mass and its innervation, of *Limax*, 288

Caffeine, effects of on hyperpolarizing after-potentials, 375
——, effects on parasympathetic ganglion cells, 376
Calcium-concentration and effects of altering in *Paramecium*, 81–91
——, effects of absence on hamster ganglion cells, 375
——, influx during repetitive firing, 350
——, mediating potassium conductance, 367–392
——, sequestering sites in cytoplasm, 89
Cerebellum, of rat treated with x-rays, 195–215
——, of rat in culture, 113–117
Climbing fibers, of cerebellum, 204
Colchicine, effects of on protein synthesis and tubulin metabolism, 453–462
Cyclic AMP, in frog's sartorius muscle, 445–449
Cyclic GMP, in end-plate of frog muscle, 447

Denervation, effects of on proteins in cockroach muscle, 104
Dorsal root ganglion, 467
Dyes, sensitive to membrane potential, 185–193

Effector systems, of jellyfish, 143–156
EGTA, effects of on *Paramecium* potential, 86–89
Electric fish, 255
End-plate, of frog's muscle, 445

Freeze substitution, 466

Ganglion, abdominal, of *Aplysia*, 132
——, cerebral, of *Limax*, 286
——, dorsal root, of cat, 467
——, fusion of, in evolution of leech, 402
Ganglion cells—dorsal unpaired median, of insect, 43–79
——, hamster submandibular, 367–392
——, segmental mechanoreceptor, of leech, 393–405
——, sensory of *Aplysia* abdominal, 121–139
Glutamate, in spreading depression, 425
Glutamate receptors, 427

Hyperpolarizing potentials, in hamster ganglion cells, 378
——, in electric-fish pacemaker cells, 258

Identified neurons, giant, of crayfish nerve cord, 301–307
——, inter, of *Aplysia* abdominal ganglion, 121–139
——, paired giant sensory, of *Aplysia*, 121–139
——, right giant (R_2) of *Aplysia*, 343
——, unpaired median, of locust, 43–57, 59–79

Learning system, of touch, in *Octopus*, 160

Mechanoreceptor neurons, giant, of *Aplysia* abdominal ganglion, 121–139
Membrane-potential-sensitive dyes, 185–193
Memory, short-lasting, in *Octopus*, 159–172
Microtubules, 459, 473–475
——, in unmyelinated axons, 88, 89, 249–253
Miniature synaptic potentials, 329–334
Mossy fibers, of cerebellum, 197
Motor program, feeding, in slug, 285–299
Myelin, 217–228, 309
Myelinated nerve fibers, effects of ventral-root section in cat, 469

Neonate, motor symmetry in, 484–487
Neurofilaments, 247
——, density of, in sensory fibers, 472
Neuromuscular junctions, of jellyfish, 152
Neurosecretion, 267, 282

Octopamine, in insects, 59
Ouabain, effects of on crab fast axon quantal content, 10

Pacemaker cells, of electric fish, 255–265
Postsynaptic potentials, effects of caffeine on, in parasympathetic neurons, 381–383
——, large, of pacemaker cells, 255–265

——, miniature, of squid giant synapse, 329
Potassium, effects of, on spreading depression, 424
——, effects on hamster ganglion cells, 374
Potassium conductance, 349, 367–392
——, permeability, 81–90
Presynaptic dense bodies, 14
Protein composition, of cockroach muscles, 93–109
Protein metabolism, of brain explants, 29–40
Protein synthesis, changes following axotomy, 353–366

Quantal content, of neuromuscular synapses of crab, 4–6

Receptive field, of leech sucker, 399
Recognition molecules, 93

Sensory neurons, of *Aplysia,* 173–179
Spike (nerve action potential) duration, effects of calcium on, 343
Spinal motorneurons, 81
Spontaneous firing, 66
Spontaneous potential changes, in hamster ganglion cells, 376, 377
Spreading depression, mechanism in chicken retina, 420–430
Substance P, 180
Synapses, excitatory, of crab stomach muscle, 20–26
——, fast axon, of crab, 1–15
——, of crab stomach muscle, 18–25
Synaptic organization—in cerebellum, 210
Synaptic reorganization, in cerebellum, 196–213
Synaptic specificity, 212

TEA (tetraethylammonium), effects of, on *Paramecium* potential, 88
——, effects on spike duration in repetitively-firing *Aplysia* neurons, 343–348
——, effects on hamster ganglion cells, 374
TTX (tetrodotoxin), effects on hamster nerve action potentials, 374
Tubulin, effects of colchicine on, 459–460
——, synthesis rate in axons, 362

Vinblastine, interaction with microtubules, 460

Journal of Neurobiology
Information for Contributors

The *Journal of Neurobiology* is an international journal publishing manuscripts in English describing original research. Papers may be submitted in any field of study associated with the behavioral functions of animals. They may utilize any technique, or combination thereof, including electron microscopy. Preference may be given to papers that contribute to our understanding of how nerve cells generate and control behavior. The subjects of the research may be any animal species. The *Journal of Neurobiology* will print acknowledgment of any books received by the Editor-in-Chief, stating title, publisher, publication date, date of receipt, and cost. A selected number of such books will be reviewed in the Journal.

Since a new U.S. copyright law became effective January 1978, the transfer of copyright from author to publisher, heretofore implicit in the submission of a manuscript, must now be explicitly transferred to enable the publisher to assure maximum dissemination of the author's work. A copy of the transfer agreement to be used for the *Journal of Neurobiolgy* is printed in the first and last issues of 1978. Additional copies are available from the Editor, or authors may photocopy the agreement from the journal. A copy of that agreement, executed and signed by the author, is now required with each manuscript submission. (If the article is a "work made for hire," the agreement must be signed by the employer.)

Brief Communications: All papers submitted will be published as soon after receipt as possible, but short papers of topical interest occupying notmore than six printed pages, with not more than five illustrations that are submitted under the heading *Brief Communications* will be given priority handling.

Manuscripts: Manuscripts are to be submitted in triplicate, an original on bond paper plus two clear copies for reviewers. They should be typed double-spaced on standard typing paper with 3/cm margins. Authors should follow closely the instructions below, conforming to the style of recent issues of the Journal. Manuscripts should be submitted to

Dr. Graham Hoyle, Editor-in-Chief
Journal of Neurobiology
Department of Biology
University of Oregon
Eugene, Oregon 97403

Alternatively, if an author considers that one of the Associate Editors more closely represents his area of research, he may submit the paper directly to that person, at the address stated on the inside of the cover of the last issue of the Journal. The Editor-in-Chief or Associate Editor will notify you of receipt by postcard.

Form: Each manuscript should include a separate title sheet containing the title of the report, running title of not more than 40 characters and spaces, contributor(s) name(s), laboratory at which the research was conducted, address for mailing, and any footnotes.

A SUMMARY must be included stating the principal results and conclusions in 250 words or less.

The text should start with an INTRODUCTION comprising an adequate background for the research being reported, a METHODS section, RESULTS, and DISCUSSION.

The RESULTS section of longer manuscripts should be divided into smaller sections with subheadings. Major headings should be centered and capitalized. Subheadings should be placed at the left margin and underlined.

The manuscript must be as concise as possible. The commonest requirement for manuscript modification is for reduction to eliminate material deemed nonessential by reviewers.

The Council of Biology Editors Style Manual is recommended as a guide for abbreviations and style, together with the basic instructions in "Suggestions to Authors," *J. Physiol.* (1966) **182:** 1–33.

Journal of Neurobiology, Vol. 9, No. 6, Pp. 499–500 (1978)

Underline all generic and species names.

References. List references alphabetically. The author(s) name(s) with initials following are to be in capitals, followed by the year in parentheses and the full title. For Journals, underline the Journal abbreviation, place wavy line under volume, give first and last pages of article after colon. For reference to a chapter from a book, list author of chapter, pages quoted, title of book, editor, publisher, city of publication. For complete book, state author, title (underlined), total pages, publisher, city of publication. Examples of the reference style are given below:

CRAIN, S. M. (1976). *Neurophysiologic Studies in Tissue Culture,* Raven Press, New York, pp. 288

DOTY, R. W. Sr. (1976). The concept of neural centers. In: *Simpler Networks and Behavior.* J. C. Fentress, Ed., Sinauer Associates, Sunderland, Massachusetts, pp. 251–265.

WILSON, D. L. (1976). Alterations of protein metabolism in individual identified neurons from *Aplysia. J. Neurobiol.* **7:** 407–416.

For examples of standard abbreviations for Journals consult: "Suggestions to Authors," *J. Physiol.* **182:** 1–33.

Citations in the text should be made in the form: "Previous studies indicated that the membrane resistance remained constant (Hagiwara. 1968)." Citations of work not yet completed or submitted but not yet accepted should be cited in the text only in the form (D. W. Wilson, unpublished). The same reference should not be included in the Reference List.

Tables, Legends, and Footnotes: Type on separate sheets.

Acknowledgments: To appear at the end of the text as a separate section.

Illustrations: Submit sharp unscreened glossy photographs. The maximum size acceptable is $8\frac{1}{2} \times 11$ inches (21.5×28 cm). Use the minimum number required to give a clear understanding of results. Excessive numbers may result in rejection and/or page charges.

All illustrations must be fully labeled, with lettering and numbering sufficiently large to allow for further reduction to page size. The lettering style should be uniform for each paper submitted.

Indicate *in pencil* on the manuscript margin the preferred location for each figure or table.

Proofs: Authors(s) will receive one set of proofs, and the original manuscript. Corrections to the proofs should be made using standard printer's markings (see Notice to Authors enclosed with the proofs). The corrected proofs and manuscript must be returned to the publisher within 48 hours of receipt to avoid delay in publication.

Reprints: Fifty (50) reprints will be furnished free of charge to the senior authors; additional copies can be ordered at the time of return of proofs (an order form is enclosed with the proofs).

Correspondence other than that concerned with submission and revision of manuscripts should be addressed to

Journal Production Department
John Wiley & Sons, Inc.
605 Third Avenue
New York, New York 10016

NOTE: It is expected that contributors will follow the principles concerning humane care and use of animals approved by the Council of the American Physiological Society.
